Delirium in Intensive Care Units

Perceptions of Physicians and Nurses

Basma Salameh, PhD, RN;
Daifallah M. Al Razeeni, PhD, MS, EMT-P, SCEMS, KSU;
Khulud Mansor, MS, RN; Jihad M. Abdallah, PhD;
Ahmad Ayed, PhD, RN; Hiba Salem, BSN, RN

Delirium is an indicator of morbidity and mortality in intensive care unit (ICU) patients. It can lead to negative outcomes and longer hospital stays, thus increasing hospital costs. Despite national recommendations for daily assessment of delirium, it remains underdiagnosed. Many studies point to a lack of knowledge among health care professionals to accurately detect and manage ICU

Abstract

Aim: To explore the validity and reliability of the Missed Nursing Care Survey after

What we need?

- Establishing Journal of Nursing Research, a peer reviewed, Scientific journal that will focus on promoting scholarly work that advances and supports the discipline of nursing.
- Nursing Research committee
- Priorities and hot topic
- Inter-professional collaboration studies
